

Software Intern

As a Software Engineer Intern at GreenNode, you will contribute to the design, development, and improvement of Cloud Platform services and AI infrastructure components, while building strong foundations in programming, systems thinking, and engineering best practices under close mentorship from senior engineers.

This is a learning-heavy engineering role, designed for early-career talents who want to grow in backend development, cloud-native systems, and large-scale distributed platforms.

Job Description

- Write code and build simple to medium backend features under the mentorship of senior engineers
- Participate in the design, development, and implementation of backend services for the GreenNode Cloud Platform
- Assist in developing and optimising backend applications to ensure performance, reliability, and scalability
- Contribute to software releases, including coding, testing, and deployment preparation
- Analyse problems, debug issues, and improve system quality
- Participate in code reviews, technical discussions, and team rituals
- Continuously explore new technologies and propose improvements for system architecture or implementation
- Working location: VNG Campus, HCMC

Requirement

Must-Have

- 4th year students (GPA $\geq$ 2.8/4.0) in Computer Science, Information Technology, or related fields.
- Solid understanding of programming fundamentals & OOP
- Basic knowledge of backend development concepts
- Familiarity with Git and basic software development workflow
- Strong learning mindset, curiosity, and willingness to debug and ask questions
- Ability to read and understand technical English.
- Minimum 3 working days/week

Nice-to-Have

- Engineering mindset: focus on correctness, performance, and maintainability.
- Problem-solving: ability to break down problems and debug systematically.
- Collaboration: openness to feedback and teamwork.
- Learning agility: curiosity and willingness to learn complex systems.

What you can get

- Build and scale B2B Cloud & AI products
- Exposure to end-to-end cloud provider environments, including distributed systems, cloud native architectures, and real production systems.
- Hands-on mentorship by senior experts of Vietnam Technology Unicorns
- Clear path to full-time roles
- Allowance & laptop, free access to gym & swimming pool, premium coffee machine to fuel your workdays
