

NGUYEN LE PHONG

Lead Software Engineer | Technical Lead

(+84)98-549-0107 | phongnguyen.itengineer@gmail.com | LinkedIn | GitHub | Portfolio
Ho Chi Minh City, Vietnam

PROFESSIONAL SUMMARY

Lead Software Engineer at Zalo PC with 8+ years delivering production software across consumer-scale messaging, CDP, fintech, education, and real-estate domains.

I combine hands-on engineering with technical leadership: turning ambiguous goals into dependable systems, guiding architecture and code quality, coordinating delivery, and strengthening observability and production operations.

CORE EXPERTISE

Leadership & Delivery	Technical direction, code review, delivery coordination, hiring, coaching, RFCs, and runbooks
Architecture	System design, multi-tenant platforms, feature flags, Micro-Frontends, and progressive delivery
Front-end & Desktop	React, Next.js, TypeScript, Electron, React Native, and Storybook
Back-end & Integration	Node.js, .NET Core, Java Spring, REST/GraphQL, mTLS, and idempotent APIs
Platform & Observability	Docker, Kubernetes, ArgoCD, CI/CD, PostHog, and production diagnostics
Quality Engineering	Jest, Cucumber, Puppeteer, Testing Library, BDD/E2E, and release readiness

PROFESSIONAL EXPERIENCE

Zalo PC - VNG Corp Ho Chi Minh City, Vietnam
Lead Software Engineer Mar 2, 2026 - Present

Returned to Zalo PC as a Lead Software Engineer, combining hands-on delivery with technical leadership across cross-device messaging and client storage.

- Delivered message backup on Zalo PC with restore on mobile, helping users retain text conversation history across device changes.
- Improved zCloud offload reliability and observability, making client-storage issues easier to detect and diagnose.
- Lead the engineering team through technical decisions, code reviews, and delivery coordination.

Technologies: React, Node.js, Electron, TypeScript, Kotlin

Zalo PC - VNG Corp Ho Chi Minh City, Vietnam
Senior Software Engineer May 2024 - Aug 2025

Core developer for the cross-platform Zalo PC (Web, macOS, Windows), serving 15M+ MAU. Delivered key features such as dark mode, dynamic theming, and user behavior tracking. Spearheaded the development of a promotion flow and a scalable design system for 50+ developers. Optimized performance, enhanced maintainability, and contributed to business growth through robust and efficient solutions. Actively maintained and improved Zalo's Android mobile app, ensuring the stability and performance of critical features for nearly 80 million users.

- Delivered over 10 features, including dark mode, a download module, kiki bot, log tracking, and more, improving UX and engagement.
- Developed a promotion flow with integrated tracking and monitoring systems, driving activation success across 15M+ MAU.
- Led the development of a scalable design system using Storybook, ensuring UI consistency and efficiency for 50+ developers.

Technologies: React, Node.js, Electron, TypeScript, Kotlin

NDSVN JSC Ho Chi Minh City, Vietnam
Senior Software Engineer Lead Aug 2025 - Mar 2026

Owned product delivery and technical direction post-CTO transition, leading architecture decisions, rollout systems, enterprise-grade integrations, and cross-team alignment while managing a delivery team of 8 developers (including 4 seniors) and 3 QC engineers.

- Engineered a .NET Core multi-tenant feature flag system (30+ tenants, ~40k users) with a priority rule engine, percentage rollout (tenant/segment/env), JSON-config values, and stateless runtime evaluation - powering mobile/web apps and enabling controlled, progressive production releases across high-traffic tenants.
- Built secure integrations with Gtel & Napas: RSA-4096 handshake, AES-256 payload encryption, mTLS mutual authentication, certificate pinning, retry queues, idempotent API contracts, and ACK-driven monitoring for unstable third-party services.
- Implemented Micro-Frontend architecture (Angular host + React modules) enabling independent deploy cycles and feature isolation - reducing regression surface and deployment coupling across teams.
- Re-structured engineering organization after leadership transition: defined org chart, competency matrix, workload routing, and ownership boundaries - unlocking autonomy and reducing lead-time on technical decisions.

Technologies: React.js, Angular, Node.js, Flutter, .NET, AKS/FKE/K3S/EKS

PROFESSIONAL EXPERIENCE - CONTINUED

PrimeData VN Senior Full-stack Software Engineer

Binh Thanh
July 2020 - Apr. 2024

Built CDxP, a customer data platform for identifying, unifying, and activating customer profiles from heterogeneous schemas across disconnected systems.

- Led Front-end team, delivering 10+ projects including CDxP app, Magento & WordPress demos, JS SDKs, mobile SDKs, and more.
- Managed team of 4 members, aligning with product roadmap to satisfy multiple major partners, enhancing UI/UX and implementing advanced features like 360 profiles and campaign builders.
- Developed lightweight JS SDK with full functionalities (<200kb, <150ms load time), facilitating seamless integration across projects.

Technologies: ReactJs, Next.js, Typescript, WordPress, SDK, Antdesign, Team Leadership, React Native, Node.js

Splus-Software JSC Java Developer

Tan Binh
Mar 2019 - July 2020

An out-sourcing company. Most projects revolve around mobile and web apps.

- With expertise in the end-to-end software production process, I led a small team, mastering the phases from requirements gathering to project security, laying the groundwork for future leadership roles.
- Helped secure and deliver key projects such as Savvy and Bank Tool, generating over \$20,000 in revenue and earning Best Rookie of the Year recognition.

Technologies: Java, Spring Framework, ReactJs, Next.js, Typescript, React Native, My SQL, Antdesign, Realm DB, Wordpress, Node.js

Propman Guru Fresher Front-end Developer

District 2
May 2018 - Jan 2019

A real estate-domain startup. I was one of the founding engineers.

- Initiated involvement in primary web app development as a Front-end Developer. Obtained foundational web development skills, with a specialization in React JS and related technologies. Collaborated on responsive design projects, prioritizing enhancements for user experience.

Technologies: ReactJs, Javascript, Wordpress, Material UI

SELECTED PROJECTS

Digital SAT Math

Oct 2023 - Present

Technologies: Next.js, React, React Native, Antdesign, Docker, GCP, Directus, Google Ads, Stripe

- Orchestrated product development spanning UI/UX design, product engineering, and user behavior analysis, resulting in a global user base exceeding 10,000 visits and 3,000 signups within two months.
- Demonstrated efficiency and resource optimization in front-end application development by leveraging a single Cloud Run instance with 1 CPU and a memory limit of 256 MiB.

Event Tracking - Web SDK

May 2021 - Jan 2024

Technologies: Vanilla JS, WebSocket, Web Worker, Firebase

- Successfully developed over 5 modules, incorporating more than 10 advanced features using vanilla JS. Achieved an impressive bundle size of <200kb and a load time of <150ms (metrics measured prior to employing all optimization techniques for the bundle).
- Utilized web workers and service workers to facilitate multitasking in the background, effectively managing complex functionalities and handling multiple edge cases, such as simultaneous multi-tab usage.

EDUCATION

Nong Lam University

Sep. 2015 - Dec 2019

Bachelor of Information Technology, Minor in Software Engineering - GPA 3.36
